ANNUAL REVIEW

1977

I am happy to see that the Division of Vital Statistics has been able to publish its data for 1977 so promptly and hope that this second edition of the Vital Statistics Annual Review will prove as helpful and informative as the first.

Introduction

This publication is a summary of Vital Statistics of the Province of Alberta for 1977, as of November 30th, 1978.

This year's publication, second in the current series, has been expanded to include Comparative Vital Statistics for Selected Regions and Countries for 1976 as compiled by Mr. D. Nagnur, Demographer, Vital Statistics & Disease Registries Section, Statistics Canada. Also included are comparative Alberta population figures for 1976 and 1977 with percentile Birth, Death and Marriage rates.

I have been gratified with the acceptance of the combined 1975 and 1976 Annual Review by recipients across Canada and throughout the world and trust the 1977 Review will once again reflect the vital events occurring within the Province of Alberta.

All of the tables were generated from the Vital Statistics computer system on an IBM Printing Subsystem. I wish to thank Dr. Sit-tui Ong, Douglas Heiland and Norma Harper of Research & Planning for their invaluable assistance in compiling and preparing this review.

Comparative Vital Statistics for Selected Regions and Countries

Several of the Vital Statistics Annual Reports for the year 1976 containing national as well as provincial tabulations have already been released or are in the process of being released in a shortwhile. In this context, it may be of interest to observe the levels and experiences in vital rates for other regions and some selected countries in the world vis-a-vis those for Canada. The attached tables present some comparative rates for 1976 or for the latest available year with respect to some countries. The rates for the countries other than those for Canada have been compiled from the United Nations Yearbook for 1976. It is hoped that the attached tabulations may help gauge recent Canadian experience in a comparative perspective.

WORLD SUMMARY OF VITAL RATES

GLOSSARY OF TERMS

Vital Statistics: Those records dealing with births, deaths and marriages of persons. Other vital events not included in this review are stillbirths, foetal deaths, adoptions and divorces.

Gestation Period: The time between the conception and birth of a child, the usual length being 40 weeks.

Live Birth: A complete expulsion or extraction from the mother, irrespective of the duration of the pregnancy, of a foetus in which, after expulsion or extraction, there is breathing, beating of the heart, pulsation of the umbilical cord or definite movement of a voluntary muscle, whether or not the umbilical cord has been cut or the placenta is attached.

Infant Death: Death of a child between birth and one year of age.

Neo-natal: The period from birth to one month (28 days) of age.

Residents: Only those events occurring to Alberta residents in Alberta are included here. Events occurring to Alberta residents temporarily out of the province are not included in this report. The inclusion of out-of-province events to Albertans would result in approximately a 2 per cent to 4 per cent variation, and are not generally available until two or three years after the event from Statistics Canada.
